

## DM4 Digital Motor

The DM4 is a micro-sized motor. It's made specifically for driving light weight lenses where size and weight are critical, such as Steadicam and 3D rigs. In order to prevent wear and maintain its precision, the motor uses polished metal gears coated with super hard diamond-like-carbon to virtually eliminate wear.

The integral motor bracket with an adjustable rosette gear makes it easy to position the motor in tight places.

The DM4 is compatible with MDR-2, Digital Micro Force, and the single channel Video Lens Control units.

	<b>DM4</b>
Size (mm)	90 x 37 x 22
Weight (g)	250g (with bracket)
Max Speed at output gear	1.8 Rev/s
Output gear	0.8m
Max continuous torque	0.2Nm
Max peak torque	0.45Nm
Product Number	4206
